

WELCOME TO THE SYSTEM

You bought a productivity system built for your brain. Not the other way around.

Everything inside this box was designed around one idea:

dopamine is the fuel, and we're going to stop fighting that fact.

No rigid schedules. No shame. No "just try harder." Just tools that work the way your brain actually works.

Hi, welcome in.

If you're reading this, you've probably tried the normal productivity systems — GTD, the bullet journal, the 5am wake-up — the ones written for brains that don't need to be tricked into starting. And somewhere along the way, you concluded the problem was you. It wasn't.

The promise: use even one piece of this system for two weeks — the daily focus sheet, one task breakdown, one body doubling session — and you'll get more done than in your last month of "trying harder." That's the dopamine mechanics, not hype.

Your first 15 minutes

1

Print two things.

The reference card and one daily focus sheet. Tape the card by your screen. Three minutes, changes the week.

2

Follow the quick-start guide.

Build the skeleton first — don't customize yet.

3

Add three real tasks to Today

in your dashboard. Pick the hardest — that's your first focus sprint tomorrow.

4

Schedule one body doubling session

this week. Even one. The guide includes ready-to-send invites.

Questions, a stuck setup step, a "where does this go" moment — support@dopakit.com, a real human replies within 24 hours.
